Peer Review Checklist
Tips for new reviewers

When you’re invited to review a manuscript
- Confirm the manuscript is in your area of expertise
- Make sure you have enough time
- Check for competing interests

When you’re reading the manuscript
- Identify the research question and key claims
- Think about context and related literature
- Look at the figures and tables. Are they clear? Do they represent what the study is about?
- Examine the results. Are they supported by the data?
- Read the conclusions. Do they make sense?
- Check the methods. Are they appropriate and reproducible?
- Review the journal guidelines and publication criteria
- Keep everything confidential!

When you’re writing the review
- Start with a summary of the research
- State your overall impression
- Number your comments and separate them into “major” and “minor” issues
- Give concrete examples
- Refer to specific sections and page numbers
- Don’t focus on spelling and grammar
- Be professional and respectful
- Indicate if you’re available to look at the revised version
- Include positive feedback too!
- Finish on time
